

EMPLOYEE ACCOUNTING DEVICE AND METHOD OF OPERATION

Abstract

An employee accounting device includes an automatic teller machine with time recorder and employee accounting systems
5 utilizing a specialized processor for direct work time
accounting and payment. The employee accounting is configured
to function for check-in and check-out for a corporation or
other similar entity. The employer enters accounting
information for payroll deductions and taxes into the
10 specialized processor. The employee time is accounted for and
subsequent direct payment is provided in cash from the employee
accounting device to the employee. Monies may be transferred
and deposited at the employee's discretion through the use of a
magnetic card having a unique personal identifier.
